NetDocuments Introduces SetBuilder to Simplify Document Organization for Transactional Closings and More

News

May 1, 2019

NetDocuments, the leading, secure cloud-based content services platform, today introduced SetBuilder, the fully-integrated NetDocuments application based on the acquisition of Chapman and Cutler's Closing Room solution. Originally developed by Chapman, NetDocuments SetBuilder provides an intuitive way for deal teams to coordinate on closings, automates manual closing binder processes, eliminates the need for physical closing rooms, and drastically reduces the time, cost, and effort of producing closing binders for clients and third parties.

"This technology completely transformed the way our firm manages transactions and coordinates closings. With the integration with NetDocuments complete, we anticipate a similar experience by other NetDocuments customers," said Eric Wood, Chapman's Practice Innovations and Technology Partner and Closing Room project leader.
